PROFESSIONAL SUMMARY

Technical Lead with over 8 years of experience in designing and delivering scalable web and AI-powered applications. I have extensive expertise in GenAI, multi-agent automation platforms, cloud-native solutions, and full-stack web development. I have a proven track record of leading teams, driving efficiency with AI tools, and delivering high-quality products on time. Skilled in transforming unstructured data into actionable insights for LLM and AI-powered workflows, I also possess hands-on experience with CI/CD, automated testing, and deployment of enterprise-grade applications.

TECHNICAL SKILLS

- **AI & GenAI Tools:** LLMs, LangChain, LangGraph, RAG, MCP, Prompt Engineering, Gen AI Workflows
- **Languages:** JavaScript, Python, HTML, CSS
- **Frameworks:** React, Node.js, Express, FastAPI
- **Libraries:** Redux, RTK Query, Socket.IO
- **Automation:** Playwright, Appium, Automation Frameworks, CI/CD Pipelines
- **Cloud & Databases:** AWS (Lambda, S3, CloudFormation), MongoDB, IndexedDB, Redis
- **Tools:** Postman, VS Code, GitHub, GitLab, BitBucket, Jira, Cursor, Nagios, PRTG, Docker, WebRTC

EDUCATION

JNTUK Affiliated College

B.Tech in Computer Science and Engineering

India

June - 2015

EXPERIENCE

Technical Lead

Aug 2024 – Present

IdeyaLabs, Hyderabad, India

At IdeyaLabs, I lead a team of 35 engineers and AI specialists, managing multiple projects concurrently with a 100% on-time delivery record. I designed and launched a GenAI-powered no-code automated testing tool that reduced test creation time by 60% and defect leakage by 20%. Additionally, I developed an AI-driven PDLC agent using GenAI tools which accelerated delivery timelines by 35%. By integrating GenAI tools into various workflows, I improved overall engineering efficiency by 30% across testing, documentation, and release processes. I built pipelines to process unstructured data from tools like Figma, Jira, and Word documents, converting it into structured insights for AI applications. Collaborating closely with clients, I helped define requirements and prioritize the product backlog, increasing stakeholder satisfaction. Furthermore, I implemented CI/CD pipelines and AWS cloud-native deployments that reduced release cycle time by 40%, and partnered with DevOps and QA teams to introduce automated regression, load, and performance testing strategies across products.

Senior Software Engineer

Apr 2023 – Aug 2024

ONPASSIVE, Hyderabad, India

In this role, I designed, developed, and maintained O-Connect, a high-performance audio-video collaboration platform supporting over 10,000 concurrent users using React, Node.js, WebRTC, Redis, and AWS Lambda. I integrated GenAI-powered features such as virtual backgrounds and intelligent noise suppression, significantly enhancing meeting quality and user experience. I also implemented LLM-based real-time audio translation enabling seamless language translation during meetings. Furthermore, I built O-PAL, a real-time chat

platform featuring AI-driven content moderation, smart recommendations, and analytics, which improved communication safety and user engagement. To optimize performance, I architected multi-region deployments with advanced caching strategies that reduced latency by 35% and enhanced global availability. I worked closely with DevOps and IT teams to ensure seamless scalability and reliability under heavy concurrent loads.

Software Engineer

Oct 2021 – Apr 2023

Trevista Innovations, Hyderabad, India

At Trevista Innovations, I developed JL MUSH, a telemedicine platform that enabled patients to book appointments and consult doctors virtually, thereby improving patient access and doctor efficiency. I also built Cellix Bio, a centralized pharmaceutical patent data platform that consolidated complex research datasets into an accessible dashboard for faster insights. My responsibilities included designing and implementing RESTful APIs, database schemas, and CI/CD pipelines to enhance deployment speed and platform reliability. Collaborating with clients and stakeholders, I gathered requirements and conducted feasibility studies to deliver solutions aligned with business goals. Additionally, I optimized platform workflows and integrations, reducing operational overhead by 25% and improving data retrieval performance. Working closely with a small team, I consistently delivered high-quality applications within tight deadlines, demonstrating strong cross-functional collaboration.

Software Engineer

Oct 2018 – Oct 2021

Tech Mahindra, Hyderabad, India

While at Tech Mahindra, I developed and maintained responsive web applications for GSK across multiple devices and regions. I worked extensively with VEEVA Multichannel CRM for content management and analytics tracking. My role also involved pulling and validating vault reports and KPIs to ensure accurate data capture and reporting. Additionally, I localized web pages and presentations for multiple regions, enhancing accessibility and relevance for diverse audiences.

Jr. System Engineer

Oct 2017 – Oct 2018

VAMA Industries Limited, Hyderabad, India

In this role, I worked on the Bhuvan project for the National Remote Sensing Center (NRSC), managing Linux-based servers and infrastructure supporting satellite data processing. I designed and implemented the Nagios monitoring system and integrated PRTG, which improved system reliability and reduced incident response time by 25%. I developed Node.js REST APIs to fetch and serve relevant satellite data for internal applications. Additionally, I assisted with requirement gathering, feasibility studies, and client demos, contributing to timely and accurate project delivery.

PROJECTS

iMAP – IdeyaLabs

Designed and deployed an AI-powered PDLC automation platform integrating NLP, RAG, and multi-agent orchestration, reducing development cycle time by 40%. Implemented role-based access control and audit trails to ensure enterprise-grade security and compliance across all project workflows. Integrated with CI/CD pipelines and cloud environments, enabling automated deployments and reducing release failures by 25%. Enhanced collaboration with AI-driven dashboards for project managers, improving cross-team visibility and reducing escalation cases by 20%.

iTAF – IdeyaLabs

Built a no-code testing framework enabling QA and business teams to author automated tests without coding, cutting test creation effort by 60%. Integrated with Playwright, Appium, and CI/CD pipelines, ensuring seamless cross-platform (web & mobile) automation and reducing regression cycle time by 40%. Delivered real-time analytics and defect reporting dashboards, improving release confidence and reducing defect leakage by 25%.

O-Connect – ONPASSIVE

Architected a cloud-native, scalable video conferencing platform supporting 10,000+ concurrent users with high availability and low latency. Implemented AI/ML-driven features like noise cancellation, smart backgrounds, and real-time transcription, boosting user engagement by 35%. Modularized architecture for plug-and-play features (chat, screen share, breakout rooms), accelerating feature delivery by 30% and improving maintainability.

O-PAL – ONPASSIVE

Designed a modularized, cross-platform chat architecture (web, iOS, Android), enabling seamless scalability and reducing feature delivery time by 30%. Integrated AI-powered features such as smart replies, sentiment analysis, and personalized recommendations, improving user engagement by 25%. Implemented end-to-end encryption and secure data handling, ensuring compliance with global privacy standards and boosting user trust.

JL MUSH – Trevista Innovations

Developed a telemedicine platform enabling patients to book appointments and consult doctors virtually, improving patient access and doctor efficiency. Implemented RESTful APIs, database schemas, and CI/CD pipelines, enhancing deployment speed and platform reliability. Optimized workflows and integrations, reducing operational overhead by 25% and improving data retrieval performance.

Cellix Bio – Trevista Innovations

Built a centralized pharmaceutical patent data platform consolidating complex research datasets into a single, accessible dashboard for faster insights. Designed RESTful APIs and database schemas, improving retrieval speed and reliability.

GSK Web Application Development – Tech Mahindra

Developed and maintained responsive web applications for GSK across devices and regions. Managed content and analytics using VEEVA Multichannel CRM. Pulled and validated vault reports and KPIs for accurate reporting. Localized web pages and presentations for multiple regions.

Bhuvan Project – VAMA Industries

Managed Linux-based servers and infrastructure for satellite data processing at NRSC. Designed Nagios monitoring system and integrated PRTG for better reliability. Developed Node.js REST APIs to fetch relevant satellite data. Assisted in requirement gathering, feasibility studies, and client demos.

ACHIEVEMENTS

- **Red Hat Certified System Administrator: (verification Id : 180-208-563)**
Demonstrated expertise in Linux system administration, including installation, configuration, and troubleshooting of Red Hat Enterprise Linux environments.
- **Bravo - Best Employee Award - Tech Mahindra:**
Recognized at Tech Mahindra for consistent high performance, dedication, and driving impactful results for 3 consecutive quarters.
- **Best Mentor Award - Ideyalabs:**
Awarded at IndeyaLabs for exceptional guidance and support in team skill development and project success.
